

GHANIYA SHOAIB

UI/UX Designer

Rawalpindi, Pakistan | shoaibghaniya@gmail.com | linkedin.com/in/ghaniyashoaib

SUMMARY

UI/UX design student building end-to-end product case studies — from design tokens and component systems through high-fidelity, prototyped interfaces. Experienced directing AI tools inside a structured design workflow, with a consistent practice of auditing and correcting AI-generated output rather than accepting it as-is.

EDUCATION

Shaheed Zulfikar Ali Bhutto Institute of Science and Technology, Islamabad — Bachelor of Science in Computer Science

September 2024 – Present

PROJECTS

Bagged — Personal Finance Tracker — UX/UI Case Study

- Designed a Gen Z-focused finance app that tags spending by emotional context (e.g. “Regret,” “Treat Yourself”) alongside category, to build spending self-awareness rather than just recording transactions.
- Built a complete design system: an 8-style modular type scale (1.25 ratio), a 4px-based spacing scale, and semantic color tokens with Light/Dark mode variable collections.
- Designed and documented 8+ core components (Button, Input, Card, Modal, Tab Bar, and others) with full interactive-state variants — default, hover, pressed, disabled, and focused.
- Designed 12+ high-fidelity screens plus dedicated empty, loading, and error states for key flows, following a documented edge-case and failure-state process.
- Specified an AI-assisted feature (automatic spend-pattern tagging), including interaction model justification against alternatives, governor and trust-builder interaction patterns, and a Microsoft HAX usability audit.
- Wired an interactive Figma prototype covering onboarding, the primary transaction-logging flow, and a recovery path, including an overlay interaction.
- Ran a WCAG AA contrast audit on the system's color tokens, identified a failing accent color, and corrected it across the system.

Bellwether — Food Delivery App — UX/UI Case Study, in progress

- Designing a food delivery concept focused on transparent pricing, accurate ETAs, and a checkout that shows the full cost upfront rather than at the final screen.

SKILLS

Figma (design systems, variables, auto layout, prototyping) · Interaction design · Information architecture · Accessibility auditing (WCAG AA) · AI-assisted design workflows · Design documentation and developer handoff
